To the Hiring Team,

As a fourth-year undergraduate at the National and Kapodistrian University of Athens, I have built a strong technical foundation through both academic coursework and hands-on projects. Beyond my technical training, I bring resilience, discipline, and a strong sense of responsibility shaped by real-world experience.

Alongside my studies, I worked in the construction industry, performing physically demanding tasks that required endurance, focus, and accountability. That environment strengthened my ability to remain composed under pressure, adapt quickly to challenges, and commit fully to completing the task at hand. I bring this same persistence and problem-solving mindset to software development—whether debugging complex issues, refining system design, or learning new technologies.

I also value clear and effective communication. Growing up in Greece while achieving fluency in English has allowed me to collaborate comfortably across cultures. I aim to communicate technical ideas clearly, contribute constructively to team discussions, and support a collaborative engineering environment.

Above all, I am motivated by continuous growth. I actively seek opportunities to deepen my technical knowledge, improve my workflow, and contribute meaningfully to the teams I join. I am looking for an environment where curiosity, accountability, and consistent improvement are valued.

Thank you for considering my application. I would welcome the opportunity to further discuss how my technical foundation, work ethic, and adaptability can contribute to your team.

Sincerely,

Xenofon Logothetis
